## ValueBox Frameless. Efficient management with smart booking function

ValueBox Frameless is a secure and robust storage solution for managing and distributing keys, items, and valuables. With KeyWin's booking functions and controlled management, the administrator can easily book storage space for various needs, such as reserving, depositing, or retrieving items.

The main cabinet features a backlit keypad and a QR code reader for easy access. An LED light strip separates the main unit from the drawers and also functions as a status indicator. The drawers open with a controlled motion, and light seeps out to signal the user to open the drawer completely.

The modular inserts provide a premium feel and can be customized for keys, phones, or other items. Up to 15 expansion cabinets can be connected, increasing capacity flexibly by 10 drawers at a time.

KeyWin makes it easy and clear to manage bookings. The booking view is displayed in real time, showing the status of the drawers according to the booking types: Available, Reservation for a specific period, Drop-off for depositing items, and Pickup for retrieving items.

# Models for ValueBox Frameless

**control**

**Frameless Control 8D**  
Main cabinet with 8 storage drawers.  
Drawer: 277x220x45 mm  
Dimension: 300x300x810 mm  
Weight: 70 kg

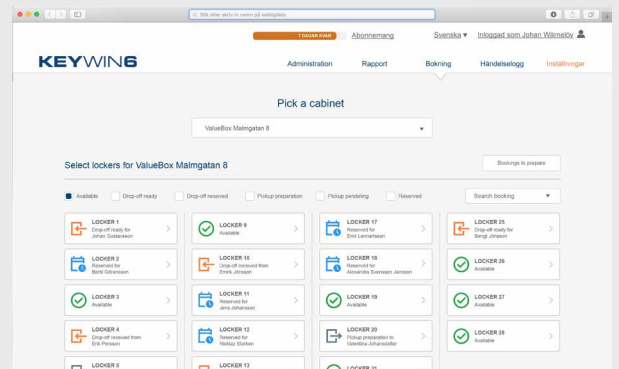

**Frameless Expansion 10D**  
Expansion cabinet with 10 storage drawers.  
Drawer: 277x220x45 mm  
Dimension: 300x300x810 mm  
Weight: 70 kg

## Visual booking function

KeyWin's visual booking view presents each storage space as a card with current availability, booking type, and status. Booking information with a PIN or QR code is automatically sent to the user via email, and bookings are easily managed through the interface. All events are logged in real time for increased security and traceability, providing a clear overview and simple administration.

**LOCKER 2**  
Reserved for Bertil Göransson

### Reservation

If a user needs repeated access to the storage over an extended period, the administrator can easily create a reservation to provide smooth and controlled access.

**LOCKER 1**  
Drop-off ready for Johan Gustavsson

### Drop-off

If you are expecting an item from a customer, the administrator can create a Drop-off that links the user to the drawer. The customer receives access with a code to deposit the item.

**LOCKER 5**  
Pickup pending for Johan Persson

### Pickup

If you need to distribute an item to a customer, the administrator can create a Pickup. Once the booking is made, a code is generated to place the item in the drawer. The customer then receives access to the drawer with a code to retrieve the item.
